

Invoice Automation System (IAS) featuring Extraction as a Service

Zia Consulting provides document automation solutions for invoice processing across the public and private sector--delivering significant cost savings while at the same time offering accelerated revenue opportunities and improving visibility into the process for enhanced compliance and actionable business intelligence.

For most organizations, the vast majority of invoices are still processed as "paper", regardless of whether they arrive as printed documents or electronic versions such as pdf's, word documents and others. To process these invoices, many accounts payable departments still rely on mostly manual processes, despite the fact that studies have shown that companies that implement automated invoice processing have costs that are up to 4 times less per invoice. Whether it's the paper cost or people cost, or missed supplier discounts or late payment penalties, the costs can be significant for even the smallest of companies.

Zia's experience providing invoice automation solutions to a wide range of enterprises and agencies across the public & private sector has enabled the creation of our ZiaOne Invoice Automation System (IAS) featuring:

- Automated Invoice Processing from ANY Source, in ANY Form
- Intelligent Capture Technology for Classification & Extraction
- Integration with your Accounting / ERP System not replacing it
- Zia OneView for End-to-End Analytics

ZIA SOLUTIONS FOR FINANCIAL OPERATIONS

Zia Consulting delivers a wide range of content services for Accounts Payable departments and other Financial Operations including Supply Chain Management, Procurement, and more. We work closely with our partners and customers to specifically design and deliver solutions for invoice automation while focusing on delivering measurable business results – reducing costs, accelerating revenue, and providing enhanced visibility into your information.

ZIA ONEVIEW

- Compliance Systems Integration

EXTRACTION as a SERVICE

- Intelligent Document Capture (IDC) Technology
- Classification & Extraction without Bar Codes / Separator Pages
- OCR / ICR
- Bulk Processing (Mailroom Automation)
- Individual Documents (In Process Capture)
- Cloud or On-Premise
- Integrated with your Accounting / ERP System

ZiaOne IAS

Invoice Automation System (IAS) featuring Extraction as a Service

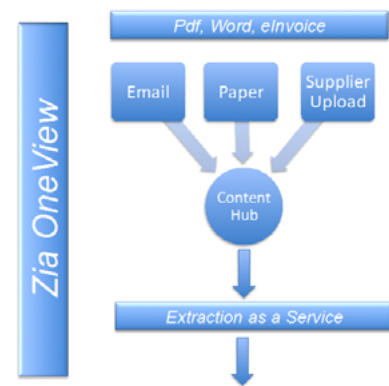

The ZiaOne Invoice Automation System (IAS)

Given the well-documented potential for cost savings, why haven't more organizations moved towards invoice automation systems? For many it's as simple as the challenge that "no two invoices are the same". Given the differences in each document, where do you find details like:

- Invoice Number
- PO Number
- Subtotal
- Taxes
- Grand Total
- Supplier Details
- Dates

In the past solutions have been based on setting up invoice "templates" with limited success, or have tried to define a comprehensive list of variables, only to find changing invoice formats and fields. To address these challenges, the ZiaOne IAS provides:

- **Any Source** – Email, Web Upload, Mobile Capture
- **Any Form** – Paper, PDF, Word
- Extraction as a Service™
- Accounting / ERP Integration
- Zia OneView for BI/Reporting & Compliance

CASE STUDY

eReplacementParts.com, an online leader in the sales of replacement parts, believes that fixing things makes sense because it is better for the consumer's wallet and the environment. As the company added more product categories, vendors and individual items, the processing of purchase orders (POs), invoices and order confirmations became more resource intensive.

With hundreds of vendors each using a different document format, the company was spending numerous hours per month printing, filing, manually entering data into a back-end system and storing paper documents. Not only was the manual process inefficient, it also went against the company's mission to eliminate waste.

Working with Zia, eReplacementParts.com has moved from a paper-based system to an invoice automation system (IAS) that is accurate and efficient. The new system saves time and frees up worker time to focus on other projects and activities – and was up and running in less than 3 months.
